z^- *2b* *usized.pdf*

Metawebyupdates.pdf Sampled posterior slope densities for multivariate Bayesian generalized linear models of species centrality standardized. In plant species, both niche breadth and the interaction between niche breadth and geographic range size positive.

$$\begin{array}{l} z^- \\ p < \\ 0.001, R^2 = \\ 0.231 \\ z^- \\ p < \\ 0.001, R^2 = \\ 0.054 \end{array}$$

Composite_v2.pdf Relationships between average z - standardized centrality in local networks, geographic range size, and niche breadth. Panel F) shows sampled posterior slope densities for multivariate Bayesian generalized linear models of average species transformation. Panel G) shows sampled posterior probability. Niche breadth had a positive effect on the local centrality only of both node types within insect networks.
